**Ref:**  
**IS-01**

## Kit Contains:

1x Lampholder                      5x Wood Screws  
1x Cable Cord Set  
1x Backplate & Cover  
1x Cord Grip

**Before you start please ensure you are competent to carry out electrical works and ensure the electricity is turned off.**

**If in any doubt stop what you're doing and seek professional advice.**

**Step 1:** Fix the backplate down onto your wooden lamp using the supplied screws.

**Step 2:** Place the backplate cover over the top of the backplate.

**Step 3:** Dismantle the Lampholder into the 3 sections and screw the bottom section onto the backplate thread.

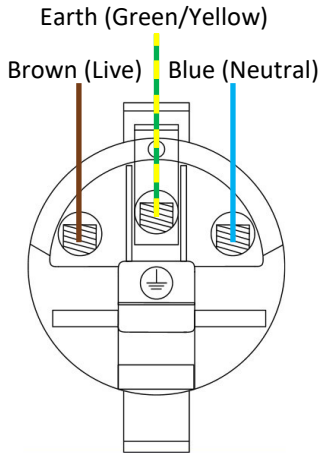

**Step 4:** Feed the cable cord set up through your light fitting so it is sticking out the top of the base of the Lampholder.

**Step 5:** Connect the cable into the connection unit of the Lampholder, ensuring the earth (Green/Yellow) is in the middle connection, It does not matter which way around the live (Brown) and Neutral (Blue) go.

**Step 6:** Carefully push the connection unit into the base of the Lampholder and screw the top section onto the Lampholder.

**Step 7:** Ensure you use the cord grip on the bottom of the light fitting by putting it across the cable and using the screws supplied to fix it into position, This will ensure the cable cannot be pulled out by accident.

## Wiring of the lamp holder

If you have any concerns or difficulties in connecting this product please contact us on details at the bottom of this manual.

All electrical parts have full CE approval.

Certification can be obtained on request via email.

**Please Note:** It does not matter which way around the Live (Brown) and Neutral (Blue) go but the Earth (Green & Yellow) must go in the center connection.

This Lampholder is a safer switched meaning you cannot turn the Lampholder to the ON position without a light bulb inserted into the socket.

Please do not force the switch on as it may break.
